

Firestone Enverge™ Cavity Wall Products

# GET UNBEATABLE PROTECTION FOR YOUR BUILDING.

## ENVERGE™ FLASHGARD™ THRU-WALL FLASHING

Enverge FlashGard Thru-Wall Flashing is a tough, resilient EPDM membrane with excellent thermal and dimensional stability. Built on over 100 years of EPDM technology experience from the world's largest rubber manufacturer, our thru-wall flashing product offers faster installation, superior building performance – and greater confidence for our partners.

Together with Enverge FlashGard pre-formed accessories, we can provide the right solution to meet your weathertight cavity wall needs – and complete your building envelope.

## FEATURES & BENEFITS

- Offers strong resistance to UV and ozone and can remain exposed on a job site for an extended period (eliminating the need for rework if construction delays occur)
- Remains flexible in all temperatures, allowing for year-round installation in all weather conditions and adaptability to irregular shapes and contours
- Offers puncture and tear resistance to withstand harsh job site conditions
- Delivers outstanding expansion and contraction characteristics so materials move with the building
- Provides long-lasting durability and resistance to corrosion, and maintains its flexibility for years

# Installation advantages for every construction project.

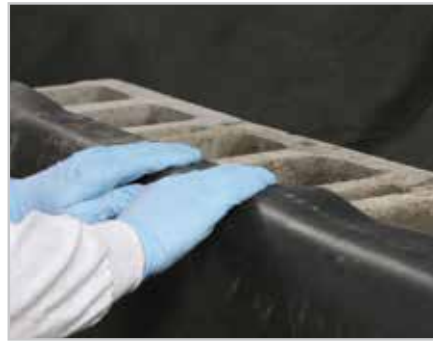

Using standard construction tools, Enverge FlashGard Thru-Wall Flashing can be easily attached to a variety of substrates or installed in the mortar bed. Firestone also offers Enverge FlashGard Self-Adhered products that provide the same flexibility and durability in a self-adhered thru-wall flashing.

## INSTALLATION METHODS

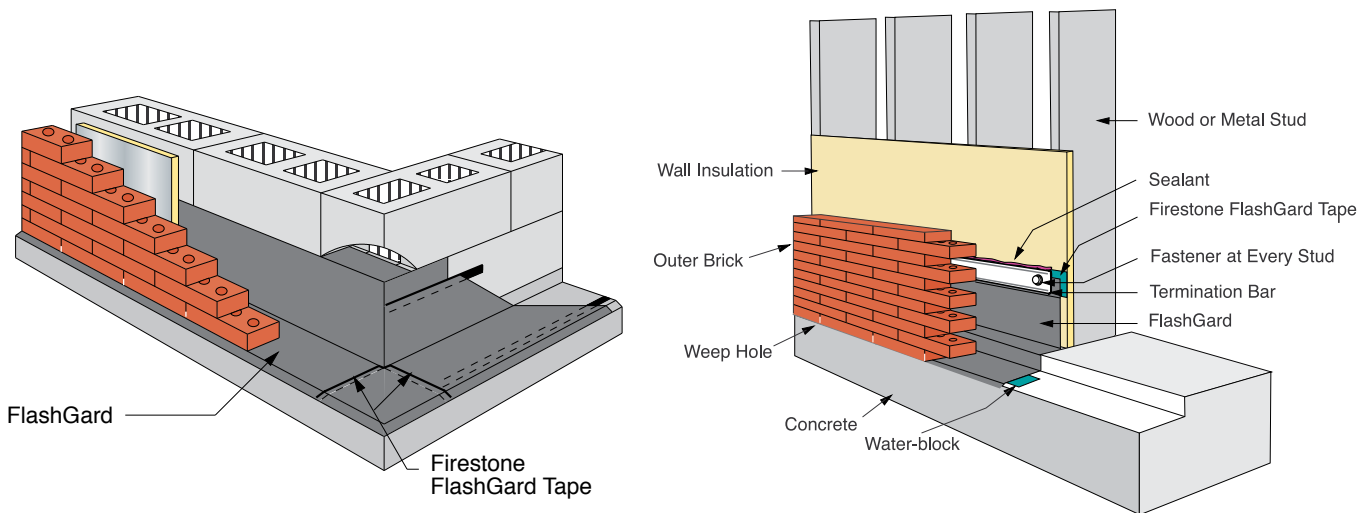

### Mechanically Attached

### Embedded in Mortar Joint

### Self-Adhered

NOTE: Details shown are conceptual details only. The design or engineering professional of record is responsible for preparing all drawings and specifications to address project-specific requirements and conditions.
